6TH ANNIVERSARY FLASH SALE PROMO !!!

March 21, 2021  
25 SLOTS ONLY

BUY 1 week supply (7pcs)  
GET 1 set (3 pcs)  
**FOR FREE!**

Lactation Corner

Thank you  
for your **Sacrifice**  
in order to  
**nurture** life

HAPPY MOTHER'S DAY

To: \_\_\_\_\_ From: \_\_\_\_\_

Lactation Corner bippy®

**FREE**

Breastmilk Storage Bag  
when you order any lactation treats

valid until supplies last

@lactationcorner

Lactation Corner

is now shipping

**WORLDWIDE**

© 2020, Happy FlyDay (HK) Co., Ltd. or its ultimate. Patent Pending.

#6THANNIVERSARYFLASHSALEPROMO

Get a **FREE**  
1 lactation cookie  
when you avail  
our flash sale  
promo on  
March 21, 2021

Lactation Corner

**Valentine Lactation Gift Set**

Available on Feb. 12-15, 2022

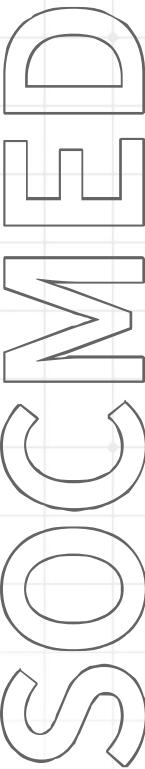

**Gift Set Includes:**

- 3 Best Sellers
  - Lactation Oatmeal (Any Flavor)
  - Lactation Spoons (3 Assorted Flavors)
  - Malunggay Polvoron (Any Flavor)
- Gift Box with Ribbons
- Mini Preserved Flowers
- Gift Tag & Note Card with personal message (upon request)
- Heart-shaped Candy
- Pigeon Baby sample packs

Send a warm Hug this season of Hearts!

**999.00 PHP**  
**20% DISCOUNT**

NESS ENERGY

# The \$SCRT Network

## Privacy for all Chains

@messenergy | Twitter | MessEnergy | Mess Energy

NESS ENERGY

*The Secret Network is a privacy-by-default protocol for decentralized applications that allows them to perform encrypted transactions.*

*Crypto appears to be anonymous at first glance but it is possible to study transaction histories and identify people.*

*Government tracking technologies have already been reported so The Secret Network strives to close the gap between blockchain and privacy.*

 secret network

@messenergy | Twitter | MessEnergy | Mess Energy

NESS ENERGY

*Private smart contracts can be deployed via the Secret Network. Inputs, outputs, and state transitions in secret contracts are all encrypted. To maintain privacy, secret contracts use a combination of secure enclaves, key management, and encryption techniques. Data is encrypted by default, however users can employ Viewing Keys to share data.*

@messenergy | Twitter | MessEnergy | Mess Energy

NESS ENERGY

*Viewing Keys can be created to give third parties access to an individual's balance. You may construct secret copies of any ERC-20 and introduce privacy to current chains, in addition to creating private smart contracts. Secret Tokens are strong, programmable, and usable in apps, but they remain private-by-default.*

@messenergy | Twitter | MessEnergy | Mess Energy

NESS ENERGY

*All transactions and rolling balances are encrypted using secret tokens. Anonymity and secrecy are preserved in this way. The Secret Network is linked to other chains by Secret Bridges. They enable the creation of Secret Tokens. Several coins can already be moved and swapped between Secret and Ethereum and Binance networks.*

@messenergy | Twitter | MessEnergy | Mess Energy

NESS ENERGY

*The multi-sign authorization process is used by Secret Bridges. A transaction across the bridge must be approved by three out of five bridge operators (Figment, Staked, B-Harvest, Citadel One, and Enigma).*

*Smart contracts are authored in Rust and compiled to Wasm using CosmWasm. The network has more flexibility and importance as a sovereign chain. As new and improved privacy security solutions become available, they can be applied quickly.*

@messenergy | Twitter | MessEnergy | Mess Energy

NESS ENERGY

*The goal of Secret Network is to become the leading multichain interoperable privacy center. The ability to leverage Secret's secrecy capabilities will be beneficial to these chains. It's understandable that the secret was constructed on Cosmos so it can easily connect to any IBC-compliant chain.*

@messenergy | Twitter | MessEnergy | Mess Energy

NESS ENERGY

*The importance of privacy will rise as crypto becomes more mainstream. Many industries, including healthcare and finance, are expected to be disrupted by blockchain. This, however, necessitates the confidentiality of personal information. A privacy solution is provided by Secret.*

@messenergy | Twitter | MessEnergy | Mess Energy

NESS ENERGY

# TOKENOMICS

@messenergy | Twitter | MessEnergy | Mess Energy

NESS ENERGY

**Tokenomics**  
studies the factors that drive the demand for tokens and the overall economics of tokens and economics. Understanding Supply and Demand is the most straightforward perspective through which to begin studying Tokenomics.

@messenergy | Twitter | MessEnergy | Mess Energy

NESS ENERGY

## SUPPLY

When novices see meme coins at \$0.00000002, they think has it'll be rich once it reaches a dollar. Understanding the market cap demonstrates that it is impossible to reach \$1 and that it is larger than the total world's money supply.

Circulating Supply	10,009,262.00 BTC	91%	Supply: How many tokens exist now	
Max Supply	21,000,000	Total Supply	19,009,368	Max Supply: The most that can exist
Market Cap	\$755,045,764,191	Fully Diluted Market Cap	\$834,055,005,529	Market Cap: current price x circulating supply
				Fully Diluted Market Cap: Price x max supply

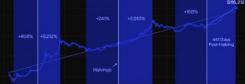

@messenergy | Twitter | MessEnergy | Mess Energy

NESS ENERGY

## Sound Money

There will only be 21 million Bitcoins available, and no one will be able to manufacture more. Bitcoin's supply is limited, demand is growing, and the price is expected to rise. This is why Bitcoin is often compared to gold.

**Bitcoin Halvings**  
Despite the fact that miners continue to create new Bitcoin, the rate of emission has slowed. The reward emissions for Bitcoin are decreased in half at each halving event.

**Inflationary Token**  
The supply of Dogecoin grows every year, and there is no supply cap. This is bad for Tokenomics because it is the polar opposite of scarcity.

@messenergy | Twitter | MessEnergy | Mess Energy

NESS ENERGY

## Deflationary Token

When the supply of a coin reduces over time, it might become more valuable. If a protocol has the ability to buy back and burn tokens, a burned coin is irretrievably lost and the token's value should rise as the supply grows.

## Allocation & Distribution

There are roughly 2 ways to distribute initial tokens:  
**Pre Mined:** The team distributes tokens to its own members, as well as to venture capitalists and other insiders.  
**Fair Launch:** Everyone has the same level of access.

*Why Does It Matter?*  
Insiders and venture capitalist hold their tokens, causing a price fall. When they are allowed to sell their tokens, this is referred to as vesting. You want to make sure that the protocol's early backers are incentivized to stick with it in the long run.

@messenergy | Twitter | MessEnergy | Mess Energy

NESS ENERGY

## DEMAND

The factors that influence people's willingness to purchase and use a token are willing to pay. Despite inflation, the US dollar is in high demand due to its utility because everything runs on USD.

## Utility

- Gas Fees** – This is payment to use the network. The more popular the network / DAPP, the higher the demand.
- Fun** – Once the games become enjoyable, GameFi has enormous potential. Take a look at how much money Grand Theft Auto and Fortnite are generating.
- Adoption** – Crypto is slowly adding in more real-world usage thus driving demand.

@messenergy | Twitter | MessEnergy | Mess Energy

NESS ENERGY

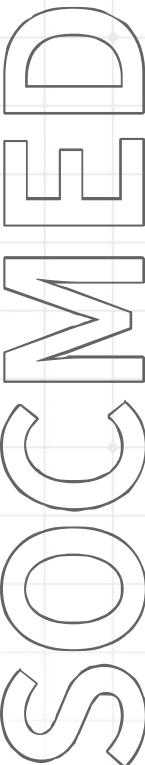

## The Memes and Narratives

**Stopping the Mercenaries** – In DeFi, anyone can be a mercenary. Farm APRs drop substantially, so you might want to switch to a farm with a higher percentage. Liquidity is still required for the protocol.

**Long-term Incentives** – Last year, we saw a number of new developments in how protocols encourage long-term holding. Having these in place reduces the token's selling pressure.

# \$66K

BTC All Time High

@messenergy | Twitter | MessEnergy | YouTube | Mess Energy

**NESS ENERGY**

## What is Zero Knowledge (ZK) ROLLUPS

Time is of the essence in cryptocurrency. Being early to a developing field gives you the best opportunity to make it big one day. Here's a list to keep an eye on.

@messenergy | Twitter | MessEnergy | YouTube | Mess Energy

**NESS ENERGY**

## LIQUID STAKING

The switch to PoS by Ethereum will be a game changer, but will require users to stake 32 ETH and their funds will be locked up. Users can deposit ETH and receive a tokenized representation of their stake that can be freely traded with protocols like Lido.

@messenergy | Twitter | MessEnergy | YouTube | Mess Energy

**NESS ENERGY**

## SOCIAL TOKENS

Creators can use social tokens to tokenize communities and reward both themselves and their fans for their efforts.

**switch**

**OPTIONS**

For the entire year of 2021, \$387 billion in options were traded between BTC and ETH. In the crypto world, options are a new sector. This industry will increase dramatically as the market matures.

@messenergy | Twitter | MessEnergy | YouTube | Mess Energy

**NESS ENERGY**

## ZK ROLLUPS

ZK Rollups, according to Vitalik, will process the vast majority of Eth transactions in the long run. These technologies enable Layer 2 chains to instantaneously verify their status to the Ethereum Layer 1, as well as provide the privacy and scale.

**DYDX**

**DAO**

From an operational and administrative standpoint, DAOs still have a lot of difficulties to solve, which will require new DAO tooling. In 2022, protocols that aid in the resolution of decentralization, accountability, legal, and contribution challenges in DAOs will be a prominent topic.

@messenergy | Twitter | MessEnergy | YouTube | Mess Energy

**NESS ENERGY**

## BRIDGES

The need for a scalable, decentralized, broadly integrated protocol that transports currency and data across blockchains will become more obvious as many ecosystems continue to flourish.

**FOREX**

Despite the huge size of the Forex market, crypto has only captured a small portion of its value, which is mostly held in USD stablecoins. Non-USD stablecoins will be a critical component in attracting billions of new users to the crypto ecosystem.

@messenergy | Twitter | MessEnergy | YouTube | Mess Energy

**NESS ENERGY**

## UNGOVERNANCE

The restrictions of DAOs become increasingly evident as they increase in size. When humans are in charge of a system, a point of failure is created. Ungovernance, as proposed by Reflexer, is one possible answer to this problem. It tries to gradually remove human authority over time.

**AIRDROPS**

Airdrops have recently been used as vampire attacks on other platforms, such as \$LOOKS. Users attempting to substitute centralized organization should expect these vampire attacks to grow in popularity.

@messenergy | Twitter | MessEnergy | YouTube | Mess Energy

**NESS ENERGY**

## POS MEV

In ETH 2, the transaction ordering will be the same as it is in current PoW. This indicates that MEVs will still be available in ETH 2, with the exception that validators, rather than miners, will be in charge of the transaction ordering process.

**ROLLUPS**

After Ethereum switches to PoS, rollups will become increasingly significant. With the PoS merge, it will become the most secure and decentralized consensus layer, with data sharding and rollups allowing for 100k IPS.

@messenergy | Twitter | MessEnergy | YouTube | Mess Energy

**NESS ENERGY**

## TOKEN-GATED COMMUNITIES

Crypto's platform-agnostic nature allows for some intriguing use cases to be implemented. Guild, for example, lets you build controlled access to any platform using advanced logic like NFTs, characteristics, tokens, whitelists, and more.

The blockchain ecosystem is always evolving and moving at a breakneck speed. Although no one can forecast the future, we may extrapolate where we're headed. This new exciting period is marked by advancements in NFTs, DAOs, and interoperability protocols.

@messenergy | Twitter | MessEnergy | YouTube | Mess Energy

**NESS ENERGY**

## How to predict future bear markets?

Because bear markets are uncertain, everyone has their own strategy. However, after a few cycles, you must develop your senses:

- Everything's going up.
- Social Media start talking about Crypto.
- Personalities starts mocking on Crypto.
- Everyone on Twitter is super bullish.

@messenergy | Twitter | MessEnergy | YouTube | Mess Energy

**NESS ENERGY**

## Advanced Strategies

Even in a bad market, there are some advanced ways for making money:

1. Shorting - Make money when the market drops, then sell at a high price and reinvest at a cheaper price later. (Risky)
2. Sector Rotation - During a bad market, not all protocols will be down. GameFi and NFTs may decline, but Ethereum Layer 2 may rise.

@messenergy | Twitter | MessEnergy | YouTube | Mess Energy

**NESS ENERGY**

## "I don't have enough money"

Try to increase your earning potential or create a second source of income:

1. Negotiate a higher salary or change jobs.
2. Create an audience, determine their problems, and then sell them answers.
3. Crypto companies are continuously on the lookout for talented writers and researchers.  
"Be so good they can't ignore you."
4. On the internet, you can learn anything for free.

@messenergy | Twitter | MessEnergy | YouTube | Mess Energy

**NESS ENERGY**

## When to Buy the Dip?

It's like catching a falling knife if you buy the dips as soon as they happen. So when?

**Dollar Cost Averaging**

Rather of spending \$1000 on ETH today, invest \$167 on the first of every month for the next six months.

@messenergy | Twitter | MessEnergy | YouTube | Mess Energy

**NESS ENERGY**

## Stablecoins

You should now be heavy in the stablecoins. It may have the potential to reduce portfolio volatility and protect capital.

**Stablecoins aren't risk-free.**

- Algorithmic stable coins have the potential to depeg
- USDC, DAI, and USDT are centralized currencies that governments may choose to freeze.

Stablecoins should be diversified. You can also hold fiat currency, but doing so exposes you to the danger of inflation.

@messenergy | Twitter | MessEnergy | YouTube | Mess Energy

**NESS ENERGY**

During bear markets, real wealth is created. However, no one offers any real advise beyond "buy the dip."

**Surviving Bear Markets**

You must survive, and you will not be able to reap the benefits of the following bull cycle if you ruin it during the bear market. Crypto will break the all-time high once more, but not all projects will succeed, which is why it's critical to position yourself wisely.
